Letter Of Recommendation

To Whom It May Concern,

Inland Power recently completed a very successful large scale project where Leone & Keeble served as the general contractor. The project consisted of three separate structures: a LEED certified office building, a materials storage and vehicle parking facility and a fleet maintenance building. All three of the buildings were completed on time, under budget and are serving their intended purposes exceptionally well.

Throughout the course of the project I found Leone & Keeble to be very professional, responsive to and concerned with the needs of Inland Power and Light including managing the construction budget as if it was their own money being spent. Inland engaged Leone & Keeble early in the design phase and their participation at that stage was key to our ability to complete the project on time and under budget. I would not hesitate to trust Leone & Keeble with future projects and feel confident recommending them for projects of any scale or type.

If you have any specific questions regarding our project or the services provided by Leone & Keeble please do not hesitate to contact me directly at johnf@inlandpower.com or by phone at (509) 789-4231.

Sincerely,

A handwritten signature in black ink, appearing to read "John Francisco", with a long horizontal flourish extending to the right.

John Francisco
Energy Services Manager
